ESR

Total Score: 14.5

Excellence: 4.5

The proposed solution is targeted towards both industry and individuals and will form the basis of an ecosystem of IoT applications shareable among its users and developers.

A range of suitable Use Cases are identified which provide the clear context and operational complexity to drive the proposed innovation.

The research challenges underlying these developments are less developed.

Impact: 5.0

The expected impacts of delivering an IoT platform and ecosystem can be effectively met by the project thanks to its strong open source approach and its crowd and participative relays.

The proposal has the potential to achieve an economic impact through the ecosystem of A GILE users. The environmental impact of the project is well identified and convincing.

The project will demonstrate the application of the IoT technologies and use cases in delivering solutions that can assist in the protection of the environment and wild life.

Communication and exploitation approaches are well structured.

ESR

Total Score: 14.5

Quality & Efficiency of Implementation: 5.0

The work plan is very well described with an effective breakdown of work packages, tasks, deliverables and responsibilities to achieve the project goals.

There is a high degree of complementarity amongst the consortium partners and there is a very good match between the experience and expertise of particular partners and their responsibilities in the project.

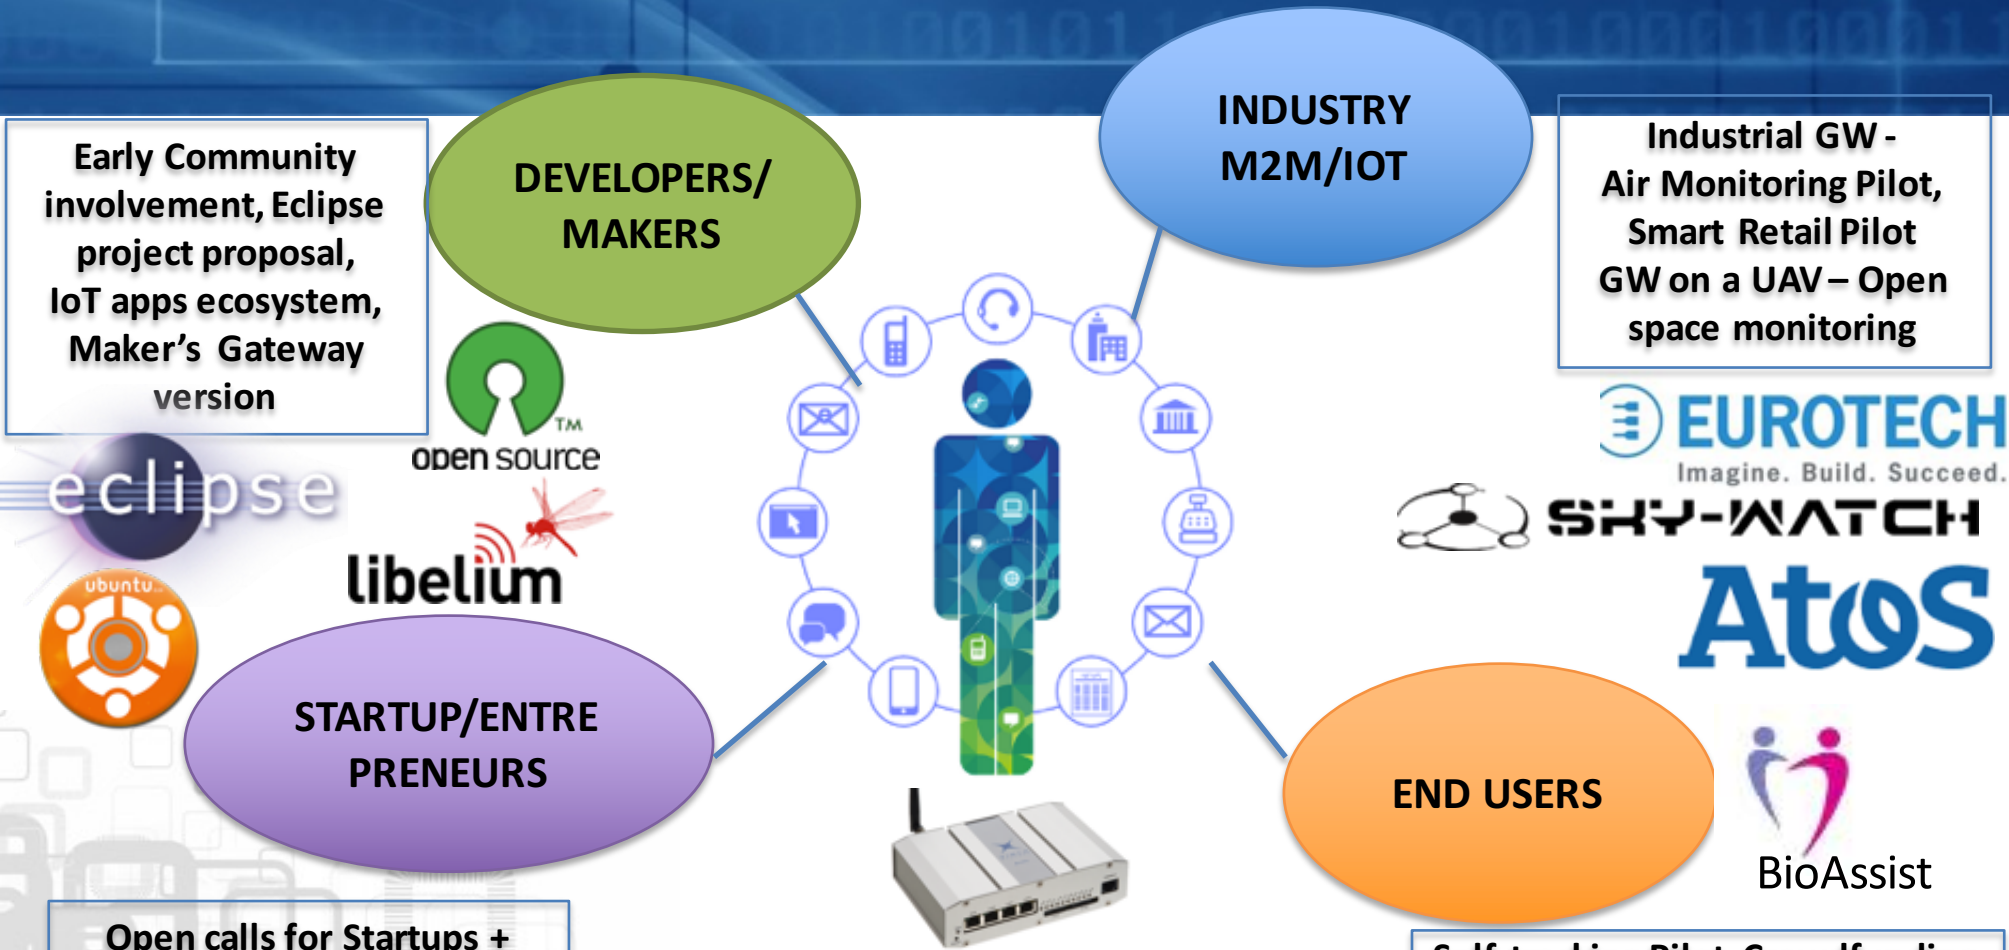

The critical risks are well identified and the mitigation measures are convincing.

The procedures for the competitive open calls are clear and well structured

Best practices

AGILE ECOSYSTEM

Early Community involvement, Eclipse project proposal, IoT apps ecosystem, Maker's Gateway version
