CRISP

Current Research Information Systems

agile

to scrum it

Scrum Methodology

An Agile framework for completing complex projects

Scrum Roles

Product Owner: Responsible for what goes into the product backlog and prioritizes it.

Scrum Master: A team facilitator. Ensures teams have what they need to get the job done. Also, sets up meetings and monitors everything.

Developers & Testers: They write code and make sure it does what it's supposed to do.

Artifacts

Product Backlog: Contains a wish list of all the User Stories of a product.

Sprint Backlogs: A list of tasks identified by the Scrum team to be completed during the Scrum sprint.

Sprint: An iteration of work during which an increment of product functionality is implemented. By the book, an iteration lasts 30 days.

Daily Scrum Meeting: A strictly 15-minutes meeting that helps set the context for the coming day's work.

Burndown Chart: The progress of the team is monitored using a Burndown Chart.

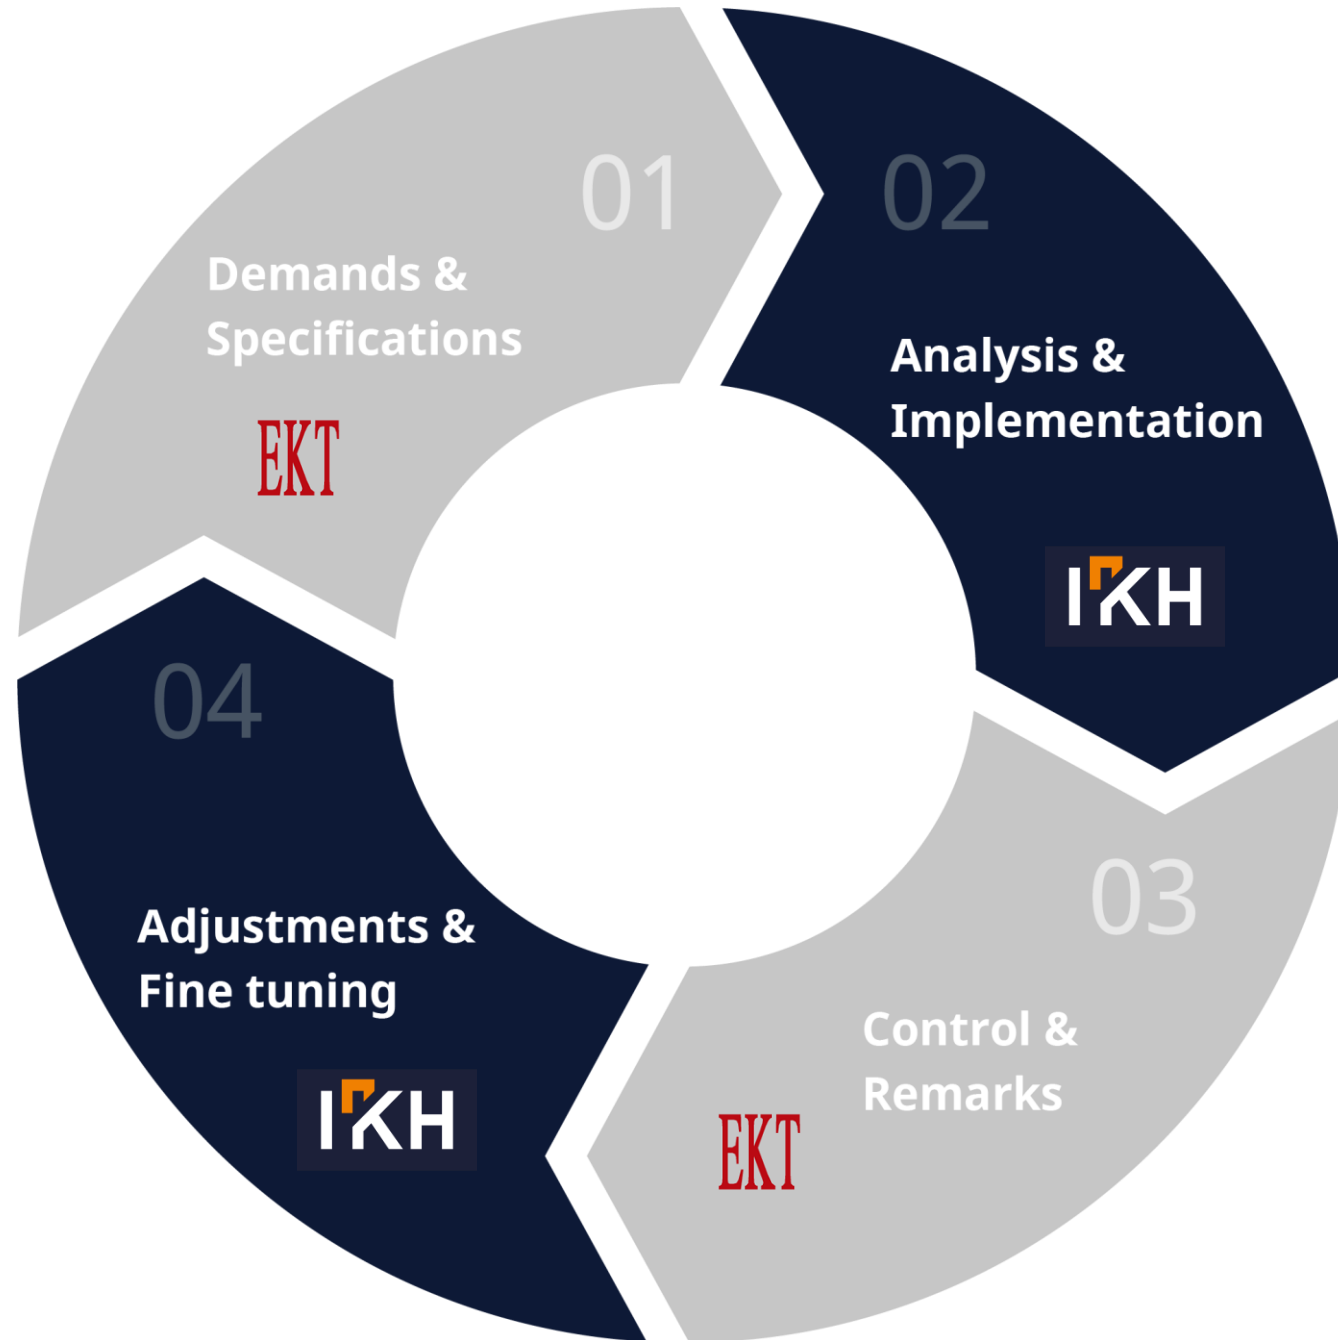

Product Increment: The sum of all the Product Backlog items completed during a Sprint and the value of the increments of all previous Sprints.

Activiti™

Already developed by EKT and incorporated in CRIS kernel

- **CERIF Model.** All CERIF entities as POJOs. 100% compliant to the latest CERIF version. Java based (Hibernate, JPA, Spring).
- **CERIF Services.** JPA data repositories for all entities. Common persistence and selection services

Most Sensitive & Time Consuming Parts

- **Web forms:** Complicated structure, Full functionality & Validations Controls
- **Import XML:** Detailed control scenarios, Control all CERIF entities
- **Configurations /Parameterization:** For all properties
- **Tests & Fine tuning**

Implementation of the Greek CRIS

and how can this redefine the way Industry perceives Universities & Research Institutes

Presented by:

Gregory Kotsikaris,

Chairman of the Board, **Iknowhow S.A.**

Ideas
without
execution
are
a hobby...

Executing
ideas
without
profit is a
good **start** ...

Innovation

Things to consider...

Research Institutes, Universities & SMEs

- Reconsider this affair...!

Innovation definition...

Entrepreneurs:

*“Innovation is **anything that makes money** [...] made in every level and in every department”*

Research Institutes & Universities:

*“Innovation is **the quantic step** [...] performed only by universities, research centers and large firms”*

Policy Makers:

*“Innovation is **dream and risk**, deriving from an excess of knowledge during research process”*

Transforming
a research **result**
into a **commercial**
product is HARD....

....Well **it was**
actually more
like **this...**

That's how
we see
universities
now...

That's how we should see them...

CRIS is like a chocolate box to the **Industry & Investors**

SMEs need universities
Universities need SME's

The **question** is...

Do we both know **WHAT** we **need** and **WHAT** we **offer**?

Let's **introduce each other again...through CRIS**

**How can we change
perceptions?**

 **Gregory Kotsikaris**
