Welcome to the OPERAS Blog!

OPERAS is a European research infrastructure for the development of open scholarly communication, particularly in the social sciences and humanities.

OPERAS-D (design project) addresses the long-term requirements for OPERAS. As a key objective, the OPERAS-D project has prepared a design study that defines governance models, scientific and technical concepts for future services that the infrastructure will provide, and has established a roadmap to achieve these goals according to the requirements for long term sustainability.

OPERAS-D

About OPERAS-D

The OPERAS-D (Design) project supports the 9 main partners (“core group”) of the OPERAS network in the development of a European e-infrastructure for open access publications in the SSH. The project addresses long-term requirements for the development of the e-infrastructure and community building, as well as seeks to expand other interested parties within and beyond Europe, and in diverse fields of the SSH. To achieve this goal, the key objectives of the OPERAS-D project are to prepare a **design study** that defines governance models, structures and scientific and technical concepts for future services that the infrastructure will provide, and establishes a roadmap to achieve these goals according to the requirements for long term sustainability. OPERAS-D engages the current and future partners in the OPERAS network to strengthen the community and develop the network of partners participating in OPERAS across Europe, specifically in central European countries.

Partners: CNRS/CLEO, OAPEN, Max Weber Stiftung (MWS), National Documentation Centre (EKT), KU Research

Landscape Study on Open Access publishing - Annex to OPERAS Design Study

OPERAS Consortium

The OPERAS-D team has conducted an analysis of academic and grey literature to identify and examine existing and emerging practices in open access publishing in the SSH, map the key stakeholders and outline key challenges in the open access publishing landscape and potential issues to be addressed by the OPERAS infrastructure. The study focuses primarily on the European environment, but also presents international initiatives of interest to the current analysis. The core findings of this desk review are in turn expected to feed into the Design Study and the roadmap that will define Governance models, structures and scientific and technical concepts for future services and the requirements for long-term sustainability, as well as the design of the business model that will address the purpose and economic logic of OPERAS.

OPERAS landscape study

Design for Open access Publications in European
research Areas for Social Sciences and Humanities

Project Number: GA 731031

OPERAS-D

WP 2: Developing network and e-infrastructure strategy

Landscape Study on Open Access Publishing

The project has received funding from European Union's Horizon 2020 research and innovation programme under grant agreement 731031.

In examining all emerging trends in journal and monograph publishing, the report outlines key challenges and potential issues to be addressed by future initiatives. Recently introduced and experimental models (such as scholar-led publishing bodies, and new university presses) share common orientations towards increased participation of researchers in the publishing process and overcome certain deficiencies of the commercial publishing model.

Notwithstanding the importance of such initiatives, as the Report concludes, fragmentation (both in terms of the size and nature of publishers and of their business models) is a key characteristic in the academic publishing landscape. In this context, the main challenge in adopting effective open access publishing practices is to identify and assess current needs and limitations that permeate the academic publishing landscape, in operational as well as communicational terms.

The landscape study confirms that successful research relies primarily on unrestricted access to high quality scientific output and cross-disciplinary, international collaboration. Shared and remotely accessed digital infrastructures constitute an important feature towards the realisation of the European Research Area, and OPERAS aspires to be actively engaged in the implementation of a new mode of science that overcomes fragmentation and enables unrestricted access to high quality scientific output.

Technical Mapping of OPERAS Consortium - Annex to OPERAS Design Study

OPERAS Consortium

The technical mapping objective was to identify the services the OPERAS Consortium would have to develop in the future and the method of implementing them in a fully distributed infrastructure. To achieve this objective, OPERAS must first know better its own technical environment, which is very diverse and uneven and then involve users to identify clearly what services are needed by the stakeholder communities.

The technical mapping of the OPERAS environment is meant to provide a global description of the technical, organisational and information systems within the OPERAS Consortium. More precisely, the mapping has collected detailed information about workflows, softwares, development languages, data and metadata management, dissemination and distribution tools.

Open Access

Usage surveys on Open Access - May-June 2017 - Annex to OPERAS Design Study

OPERAS Consortium

The objective of the survey was to identify current practices and services OPERAS will have to develop and implement for the future. The purpose of the survey was to identify current practices and services that should be developed or invented. It will serve as a basis for defining the future infrastructure of OPERAS.

The survey was addressed to five different audiences, all stakeholders in various capacities in open access: publishers, researchers, libraries, funders and the general public. It collected information and suggestions mainly about common standards, good practices, new features, new integrated services, and multilingualism. The survey was disseminated through the OPERAS networks of partners and lasted for about one month. The surveys did contain closed and open questions, in order to collect both quantitative and qualitative answers. Participation was about a hundred on average, with the highest response of 164 for the researchers' survey.

Visibility of OA monographs

The Visibility of Open Access Monographs in a European Context

A report prepared by Knowledge Unlatched Research

30 January 2018

Cameron Neylon,^{1,2} Lucy Montgomery,^{1,2} Alkim Ozaygen,^{1,2} Neil Saunders² and Frances Pinter^{1,2}

1. Centre for Culture and Technology, Curtin University, Kent St, Bentley, Western Australia

2. Knowledge Unlatched Research, United Kingdom

This project received funding from European Union's Horizon 2020 research and innovation programme under grant agreement 731031.

institutions]. This means that we clearly need to understand what the usage data is telling us before we have any use for it.

A number of respondents expressed a desire for a “dashboard” or other visualisations that could bring multiple data sources together. The consequent need for data integration and standardisation to achieve this was mentioned in one or two responses but awareness of the challenges of comparison across sources appeared to be limited. There was some evidence of a conflation of visualisation with data integration.

Respondents are small organisations with limited capacity. There is a desire for coordination and shared services, infrastructures, standards. A common thread in the responses was that the publishers and platforms who are engaged in Open Access scholarly book publishing are relatively small. This is both a challenge and an opportunity. They have limited capacity to develop internal processes and systems are looking for shared services and platforms to assist in developing usage data capabilities.

It would be of great help if we could have a main service from where we could manage all the information related to statistical usage data.

[To engage more effectively with usage data we would like a]...consortium agreement with Google on how to gather and access usage data.

We would like to see a usage aggregation service that consolidates usage data from different hosting partners into one standardised report in an automated way. In turn, this should translate into a usage dashboard that can be embedded into platforms and allows customers to use different filters to analyse usage by publisher, region, etc.

[One of our biggest challenges is...optimizing workflow, how to do more work with small resources.

What emerges overall is a picture in which platforms and publishers are implementing tools and approaches locally and using what they are provided with to some degree. There is generally a good technical awareness of the tools being deployed, but less apparent awareness of data curation and quality assurance issues.

Many of the challenges arise from issues of data integration and standardisation. Small, and even medium-sized, players have limited capacity to engage with detailed standards or technical development. Equally there are limitations on what capacity a small organisation can provide to investigate the meaning and context of the data being generated. The majority of data use seemed to be in pro-

KU Research findings

- *The metadata held and managed by OPERAS partners is inconsistent and variable in quality*
- *The visibility of OPERAS partner books in catalogues varies by publisher.*
- *Evidence can be obtained that books relevant to specific regions gain interest and attention in that region*
- *The variable quality of book metadata creates challenges in analysing visibility consistently*
- *The variable quality of book metadata creates challenges for downstream data aggregation and analysis providers*

2. Introduction: SSH and Open Science

SSH and OS are today inextricably linked with each other. OS practices are the next logical step for SSH, and the needs and insights of SSH are important for the development of OS.

This bond is not an accidental development of the SSH: their becoming open is the coherent fulfillment of the modern idea of knowledge as a process grounded on the public use of reason and confrontation with the widest possible audience.² Although the transition of SSH to OS has still to overcome many barriers,³ the fact that nowadays scholarly investigations in SSH can be conducted with the support of digital tools makes this transformation inevitable.⁴ The digitization process is the catalyst of the progressive opening of the SSH, mainly for two reasons. Firstly, new digital publishing formats allow a faster, broader and more efficient dissemination of scholarly outputs; secondly, more indirectly: new tools, e.g. such as data and text mining services, require the availability of texts published with licenses that do not hinder the use of such tools.

The variety of tools and services currently available for research and publishing requires a mediation between two essential aspects of the intellectual work, namely, on the one hand, the individual, autonomous and self-responsible activity of the single scholar and, on the other hand, both the cooperation between the scholars themselves and between scholars and institutions providing tools and services for publishing. The scholarly primitives of SSH⁵, i.e. the basic activities underlying each research process, can only be carried out if supported by publishers who are able to provide the most advanced tools for organizing knowledge, editing, annotating, disseminating, etc. More than in the other academic disciplines, in the Humanities and Social Sciences, *The publishing process is, all the more so in the era of digital humanities, an essential part of the research process itself.*

These different needs of **individuality**, autonomy and cooperation in the research process so as the development of digital tools enabling a more effective realization of the scholarly primitives

Representations of school (cyber)bullying in cinema

This article deals with representations of school bullying and cyberbullying in cinema, and more specifically in three recent fiction films: *Después de Lucia* (Michel Franco, 2012), *1:54* (Yan England, 2016) et *One Kiss* (Ivan Cotroneo, 2016). It provides an analysis based on the plot and on images of (cyber)bullying rather than...

Ibn Tulun manuscripts in Leiden

Among other libraries, Leiden University hosts several autographs by Ibn Tulun (for an introduction of the Oriental MS collections, see here). The collection is quite extraordinary among those, since every Ibn Tulun text is bound individually, even though most of them are of modest size. Their page numbers range between...

WHY OPERAS PLATFORMS ?

The three identified platforms answer the needs of the stakeholders outside the consortium

Name	Area	Target	Identified needs	Service
 OpenAIRE	All	Policy makers	Open Access monitoring + advocacy + training	Harvesting , indexing
 OPERAS doab directory of open access books	SSH	Researchers Funders Libraries	Quality assurance Monitoring	Certification of scientific quality
 OPERAS isidore	SSH	Researchers Readers	Finding resources	Discovery : Search engine through semantic tools
 OPERAS hypotheses ACADEMIC BLOGS	SSH +	Researchers Socio-economic actors	Engagement	Research for society : New ways of communicating research

Roadmap 2018

The Roadmap 2018 submission process will remain open until August, 31st and welcomes submissions of new proposals. Following the official presentation of the [ESFRI Roadmap 2018 update](#) process at ICRI2016 in Cape Town, and the [Roadmap 2018 Info Day in Malaga](#), ESFRI published important documents with the aim to provide a complete description of the requirements, the procedure and the methodology of selection of proposals for the Roadmap Update and thus facilitate new submissions by ESFRI Delegations and EIROforum Members.

The [ESFRI ROADMAP 2018 GUIDE](#) offers support to proposers preparing a submission and to the Projects and Landmarks involved in the update procedure. It contains the definitions, models and methods, and describes the procedures applied for this update. It represents ESFRI's best effort in road-mapping methodology and may thus serve as reference to complementary national exercises. ESFRI invites and welcomes the engagement of the research and innovation communities, as well as of the stakeholders from Europe and beyond, to identify potential new Projects and the ways to strengthen the running ones, and to maximise the return from the pan-European RI investment in terms of science, international collaboration and innovation.
